JUNE 21-24, 2021 | BISMARCK STATE COLLEGE, BISMARCK, ND

North Dakota
oil & gas research program

www.NDPetroleumFoundation.org

ABOUT THE SEMINAR

The North Dakota Petroleum Foundation hosts this seminar for educators to learn about the oil industry and take projects, lessons, and ideas back to the classroom. Find out more about one of our state's most abundant forms of energy from this informational, hands-on and entertaining seminar.

One of the challenges teachers face is helping students apply things they learn to everyday life. How do geography, math, chemistry, geometry, etc. tie into the oil and gas industry and careers? This seminar can help you answer that question while interacting with and learning from your peers from across the state.

HOW TO REGISTER

COST IS FREE to attend and includes:

- All course materials;
- Four nights lodging on the BSC campus; and,
- Most meals in conjunction with seminar

A \$25 deposit, which is returned upon registration checkin, is required to reserve your spot for the seminar.

Attendees are responsible for the cost of the optional professional development credits from MSU, NDSU and UND.

Application deadline is May 1, 2021, but space is limited to 50 primary and secondary educators, so register today!

WHY YOU SHOULD ATTEND

EARN CREDITS

Participants will be eligible for two professional development credits from MSU, NDSU or UND. These credits may be used for general teacher license renewals. The university will charge a fee to participants wanting the optional credit. Please note this is a repeat course and past participants are not eligible for repeat credit.

EXPLORE

Delve deep into the oil and gas industry from its prehistoric beginnings to the skills, technology and education it takes to recover it and the ways it is important to you. Topics include:

- Petroleum geology - Why is petroleum found in the rocks of western North Dakota?
- Drilling, producing and refining oil and gas and why is it important to me?
- Career exploration in the energy industry.
- History of oil and gas in North Dakota.
- Paleontology of the Williston Basin.
- Oil and the environment - Can they coexist?
- And more.

Plus, attendees get a rare opportunity to tour a drilling rig, production site, and more.
